➤ PROJECTS:

Project name	Year	Description
FinTech Transaction Management System	2022	Developed a comprehensive FinTech transaction management system covering end-to-end digital payment operations. Implemented multiple API integrations including payment gateway APIs, bank APIs, and third-party verification services. Designed ledger control mechanisms to record, track, and reconcile transactions in real time. Built modules for wallet management, transaction history, settlement processing, and error handling. Focused on data consistency, secure API communication, and system scalability.
E-commerce Website (Flipkart-like)	2023	Developed an e-commerce web application inspired by Flipkart, enabling users to browse products, add items to cart, and place orders. Worked on product listing, category management, user authentication, and basic order management. Focused on creating a user-friendly interface and smooth shopping experience.
Job Portal Website (Indeed-like)	2024	Designed and developed a job portal web application similar to Indeed. The platform allows job seekers to search and apply for jobs, while recruiters can post job listings and manage applications. Implemented features such as user registration, job filtering, resume upload, and admin management for job postings.
