(57) Abstract :

Automatic tobacco vending machines are self-service machines that dispense tobacco, a form of smokeless tobacco popular in some parts of South Asia. The primary objective of the machine is to reduce the packing cost of the manufacturer and also diminish the impact on environment because of the packing plastics. In addition to that it will also provide a convenient and accessible way for customers to purchase tobacco without the need for human interaction. Automatic tobacco vending machines offer several advantages over traditional retail outlets. They can operate 24/7, allowing customers to purchase tobacco at any time of the day or night. They are also more efficient than traditional retail outlets, as they require minimal maintenance and can be easily restocked. However, the use of automatic tobacco vending machines raises concerns about the accessibility of tobacco products, particularly for minors. It is important that appropriate measures are in place to ensure that only those who are legally allowed to purchase tobacco products are able to use these machines. The machine is expected to provide a convenience and efficient way to provide tobacco for customers. Additionally, the machine will ensure regulations and safeguards are in place to restrict distribution of tobacco products among minors.
