(57) Abstract :

The present invention relates to a biodegradable wipe material for tan removal and skin hydration, formulated with natural ingredients such as rice water, glycerol, sugar, coffee powder, and vitamins C and E. These ingredients work together to exfoliate, hydrate, and reduce hyperpigmentation, offering a safe, effective, and chemical-free skincare solution. The wipes are made from eco-friendly, biodegradable materials, including sterilized tissue paper and cotton, ensuring minimal environmental impact. Natural preservatives like citric acid and apple cider vinegar extend shelf life and maintain antibacterial properties. The wipes have an optimal pH of 4.5 to 5.5, suitable for all skin types. The product is vegan, cruelty-free, and designed for on-the-go use, making it a sustainable and ethical alternative to traditional skincare products.
