Entrepreneurship and Research Opportunities for Social Science The Future Pathways

Date: 08-09-2025

Time: 02:00 PM onwards

Venue: NND 312

Organized by: IIC of Swami Vivekananda

University

In Association with: Department of Language,

Literature and Cultural Studies

Institution's Innovation Council, Swami Vivekananda University, in collaboration with the department of Language, Literature and Cultural Studies organised a 1-day session on Entrepreneurship and Research Opportunities for Social Science: The Future Pathways on 8th September, 2025. The session was addressed by

Shri Sauraveswar Sen, Founder, Catalyst Lerning Services.

Entrepreneurship and Research
Opportunities for Social Science:
THE FUTURE
PATHYAYS

In collaboration with
Department of Language, Literature
and Cultural Studies, SVU

Program Date
8th September: 2025

Time
02:00 04:00 PM

Sawtaveswar Sen
Founder, Catalyst Lestring Services (Estd., 2011), Wis ting merot. TLSS, CLI, St Xevier's Mumbai

The session started with the official felicitation of the resource person by Professor Keya Ghosh, Director, IIC, SVU. Shri Sauraveswar Sen then took charge and proceeded by interacting with the postgraduate students present from the departments of English, Psychology and Joutnalism and Mass communication.

The session on "Entrepreneurship and Research Opportunities for Social Science: The Future Pathways" aimed to explore the intersection of entrepreneurship with social sciences, focusing on how the field can evolve and adapt in the future. The discussion highlighted the role of social science research in addressing contemporary societal challenges, its potential for entrepreneurial ventures, and how these fields can contribute to a sustainable, innovative future.

The discussion included examples of leaders from both the academic and entrepreneurial spheres who shared insights into emerging research trends, potential collaborations, and the evolving role of social science in shaping society.

• Social sciences, including sociology, psychology, economics, and political science, are fundamental in understanding human behavior, societal structures, and market dynamics. The speakers emphasized the importance of:

Human-Centered Design: Entrepreneurs can benefit from insights provided by social science research in understanding user behavior and designing products or services that address unmet needs.

Behavioral Economics and Consumer Psychology: Social science methodologies, like surveys and ethnography, can help in analyzing consumer decision-making, helping entrepreneurs create products and services that are more likely to succeed in the market.

Market Insights: Social sciences play a crucial role in identifying market gaps, societal needs, and innovative opportunities, particularly in underdeveloped or underserved regions.

• The discussion also focused on emerging research areas within social science that hold significant entrepreneurial potential. Some key areas mentioned included:

Sustainability and Green Entrepreneurship: With increasing global focus on climate change, entrepreneurs are integrating social science research to develop green innovations.

Social science researchers can help entrepreneurs understand societal attitudes towards environmental sustainability, thus aiding the development of solutions that resonate with communities.

Digital Transformation: As digital technologies reshape business operations, social science research in areas such as digital literacy, online behavior, and social impacts of automation is becoming increasingly valuable.

Health and Well-beingWellbeing: Entrepreneurs in the health and wellness sector are increasingly relying on social science research to develop interventions and products that meet the physical, mental, and emotional needs of diverse populations.

Social Entrepreneurship: The rise of social enterprises—businesses that aim to address social problems—requires an understanding of both entrepreneurship and social issues. Research in social innovation, social impact measurement, and sustainable business models are essential for these ventures.

• A significant portion of the discussion was dedicated to the synergy between academia and the business world. The following points were highlighted:

Research-Practice Partnerships: Entrepreneurs should collaborate with researchers to ensure that products and solutions are grounded in rigorous academic research. Academic institutions can provide valuable data and frameworks for understanding complex societal issues.

Entrepreneurial Ecosystems: Universities and research institutes can be incubators for innovation, fostering startup ecosystems where researchers and entrepreneurs collaborate. This model has been successful in various tech hubs worldwide and can be replicated in social sciences.

Translating Research into Action: Academics often conduct high-level theoretical research, but there is a gap in translating these ideas into practical applications. Entrepreneurs can bridge this gap by taking research findings and using them to create practical, scalable solutions.

Practical Implications for Entrepreneurs and Policymakers

Understanding the connections between entrepreneurship and social science can have significant real-world implications for entrepreneurs and policymakers.

Entrepreneurs: By incorporating social science research into their decision-making processes, entrepreneurs can better understand consumer behavior, design inclusive business models, and make informed decisions about the social impact of their ventures.

Policymakers: Research findings can inform government policies to support entrepreneurship, particularly in terms of access to funding, education, and resources for marginalized groups. Policymakers can also design regulations that foster innovation while addressing social issues such as inequality or environmental sustainability.

Conclusion

In a constructive feedback session, Dr. Arya Kamal Roy, Visiting Faculty Member, Allied Health Studies conveyed his reflections along with Shaheli Nag, M. A. English student. The session concluded with the vote of thanks delivered by Dr. Hindol Chakraborty, Assistant Professor, Department of Language, Literarture and Cultural Studies. Entrepreneurship and social science share a mutually beneficial relationship. Social science provides a deeper understanding of human behavior, societal needs, and economic systems, which can significantly enhance entrepreneurial strategies. Simultaneously, entrepreneurship offers social scientists a platform to apply their knowledge in real-world contexts, addressing issues such as inequality, social justice, and sustainability. By exploring and expanding research in this intersection, both fields can evolve together, driving innovation and creating businesses that are not only economically viable but also socially responsible.
